

Rtype::Subscriber::  
EnemyDeathSubscriber  
::receiveEvent

```
graph LR; A["Rtype::Subscriber::  
EnemyDeathSubscriber  
::receiveEvent"] --> B["ECS::Entity::getComponent"]; A --> C["ECS::Entity::has"];
```

The diagram illustrates a call graph where a function `Rtype::Subscriber::EnemyDeathSubscriber::receiveEvent` (shown in a grey box) calls two other functions: `ECS::Entity::getComponent` and `ECS::Entity::has` (both shown in white boxes). Blue arrows indicate the direction of the calls from the subscriber function to the ECS entity methods.

ECS::Entity::getComponent

ECS::Entity::has
